Session 5 – Job Analysis and Job Design

AACSB ACCREDITED

Session Objectives

- LO1: Understand the concepts and significance of Job Analysis as part of competency-based management.
- LO2: Understand the role of a manager in how job analysis informs job design and integrates into other key HR processes such as recruitment, selection, performance management, and learning & development .
- LO3: Understand the alignment of HR practices & processes with strategic business goals using a competency-based approach.

AMS Fertilizers, a 11-year-old fertilizer manufacturing company in Punjab, decided to expand their business in 3 other states namely Karnataka, Tamilnadu and Assam. They planned to approach farmers directly to understand their demands and the dealers in the said state to establish the products.

Mr. Aditya, the HR head of AMS was called by Mr. AM Singh - "Aditya today I am excited as we are expanding our business in other parts also. So, I want you to identify best candidates for our marketing department who can establish our products in the new market". He continued; Aditya I want 3 best marketing candidates in place within a week. Don't wait for any further orders, complete the task in the best possible way." Mr. Aditya also started his work with immediate effect.
He finalized 3 best candidates namely Mr. Khushwa, Mr. Dev and Mr. Bowmick. All the three candidates were having good experience, good communication skills in English and excellent track record in top fertilizer companies. After recruitment Mr. Aditya introduced them to Mr. AM Singh thereafter Mr. Singh assigned with their duties.

Two candidates, Mr Khushwa and Mr Dev were placed in Karnataka and Tamilnadu respectively and Mr Bowmick in Assam. After a month Mr. AM Singh called Mr. Aditya and started a heated argument as follows, "Aditya, I believed you and asked you to recruit 3 best candidates, Once you finalized, I didn't have a second thought, I placed them on the task, and you ruined all my dreams". Confused Aditya asked in a polite voice "But sir I brought best candidates; I cannot understand the issue sir. I didn't even get the opportunity to meet them after I left them in your cabin"
Mr. Singh said "OK, let me explain to you clearly. Except Mr. Bowmick who is placed in Assam, both of your other 2 candidates could not bring any business, they failed and are on the verge of giving up. So, Mr. Aditya tell me what should I do now. Why should I pay you if you are unable to do even a basic HR job."

A pharmaceutical company developing compounds was dependent on its PhD researchers. These men and women were expert in their field and were responsible for the team under them developing the drug through its various stages.

The company was taken over and their role became changed to negotiating with clients, costing the development work, and securing the business. They were subject to profitability metrics (the close assessment and costing of all aspects of their working day).

Needless to say, for many of them this change was extremely uncongenial, as many of them found they had no aptitude to make this change to their new role.

Job Analysis

It is a systematic process of identifying and determining the responsibilities, requirements, and nature of a job in detail. It involves breaking the job into smaller units, collecting data on each unit, and then analyzing the data to determine and establish the skills and competencies the role requires.

What is Task / Job / Job family

Grouping jobs with related functions is helpful in the job analysis process by identifying the job family, job duties and tasks of related work. For example:

- Task - A specific statement of what a person does, with similar tasks grouped into a task dimension (i.e., a classification system).
- Job - Group of tasks, duties and responsibilities an individual performs that make up his or her total work assignment.
- Job family - Grouping of related jobs with broadly similar content.

A technical service job family, for example, could be identified as follows:
Job family - Technical Service.
Job - Technical service representative.
Task - Provides technical support to customers by telephone.

Introduction to Job Analysis

- It is the procedure through which you determine the duties and skill requirements of a job and the kind of person who should be hired for it.
- Two types of job analyses can be performed: a task-based analysis and a competency- or skills-based analysis.
- Job analysis includes information about:
  - Tasks
  - Job skills or KSAOs
  - Physical setting and job demands
  - Performance behaviors
- An important concept in job analysis is that the job, not the person doing the job, is assessed, even though human resources (HR) may collect some job analysis data from incumbents
- Lays the foundation for all HR functions

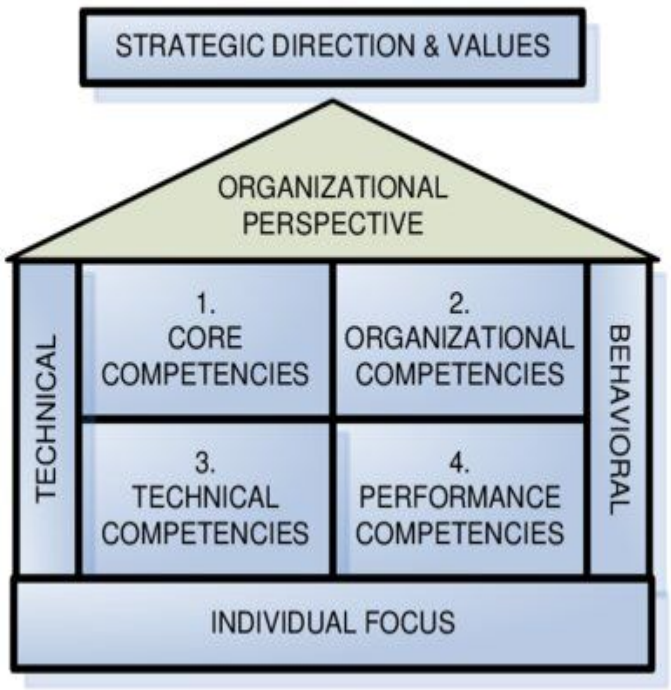
What are Competencies?

Demonstrable characteristics of a person that enable performance in a job

Measured in terms of KSAOs – Knowledge , Skills , Ability and other characteristics

Traits
Attitude
Social role
Character
Values etc

Types of Competencies

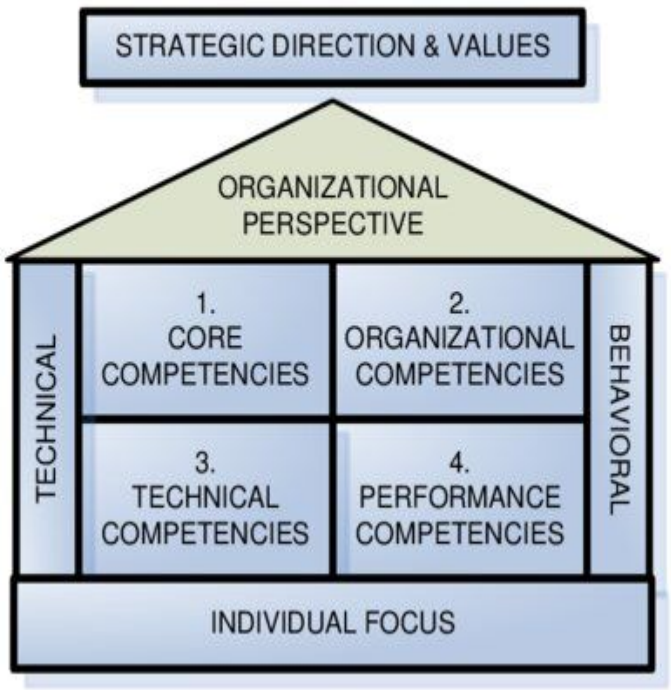


Source: Prahalad and Hamel, 1990

Core Competency at enterprise level are the essential capabilities that are central to a company's long-term success and are difficult for competitors to replicate e.g. Quality , Customer service, Technology

Organizational competencies are the skills and abilities that allow an organization to be successful in achieving its goals. They are the foundation upon which an organization's culture, core values, and strategy are built e.g. Integrity , Humility

Types of Competencies



Source: Prahalad and Hamel, 1990

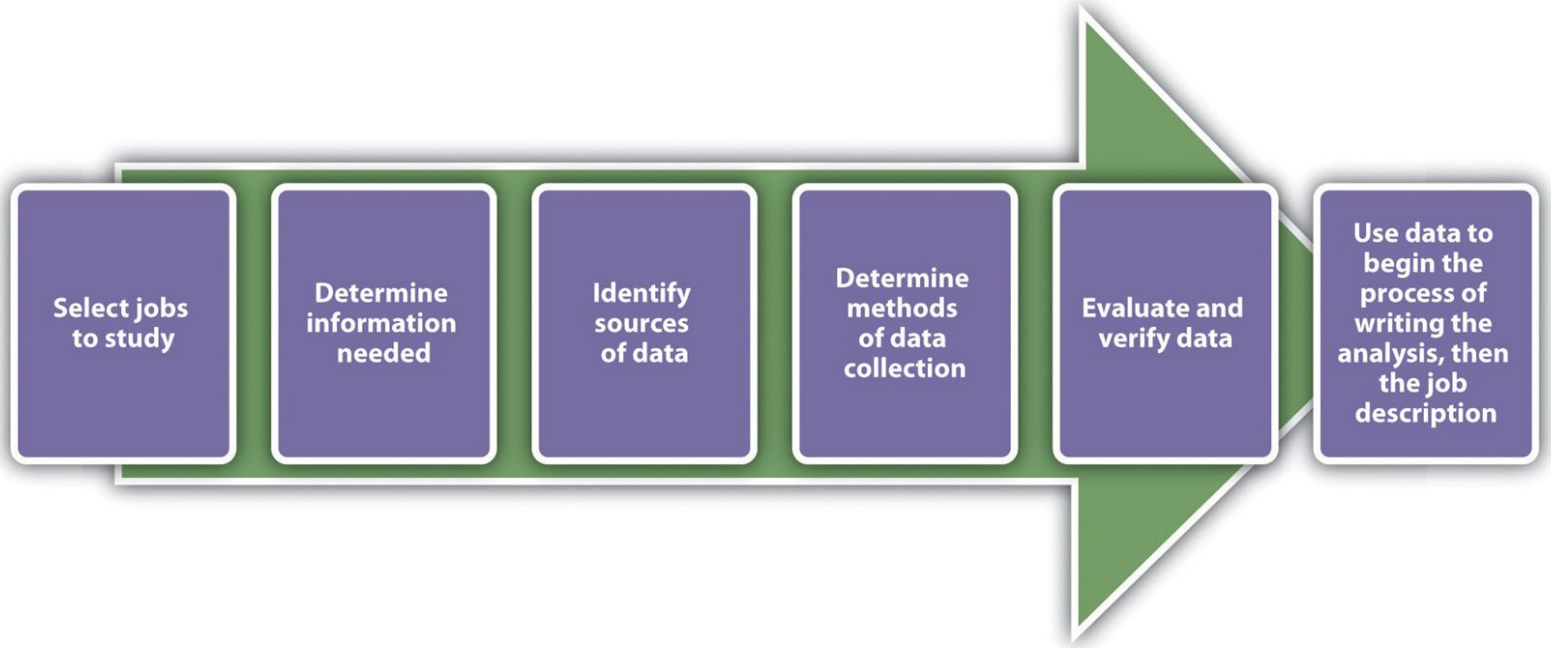
Technical competencies– Technical competencies are the skills and knowledge required to perform a specific job – whatever it is the company does. e.g. Programming, Compliance etc

Performance competencies are the skills and abilities and knowledge required to interact with others e.g. Business acumen, Negotiation skills

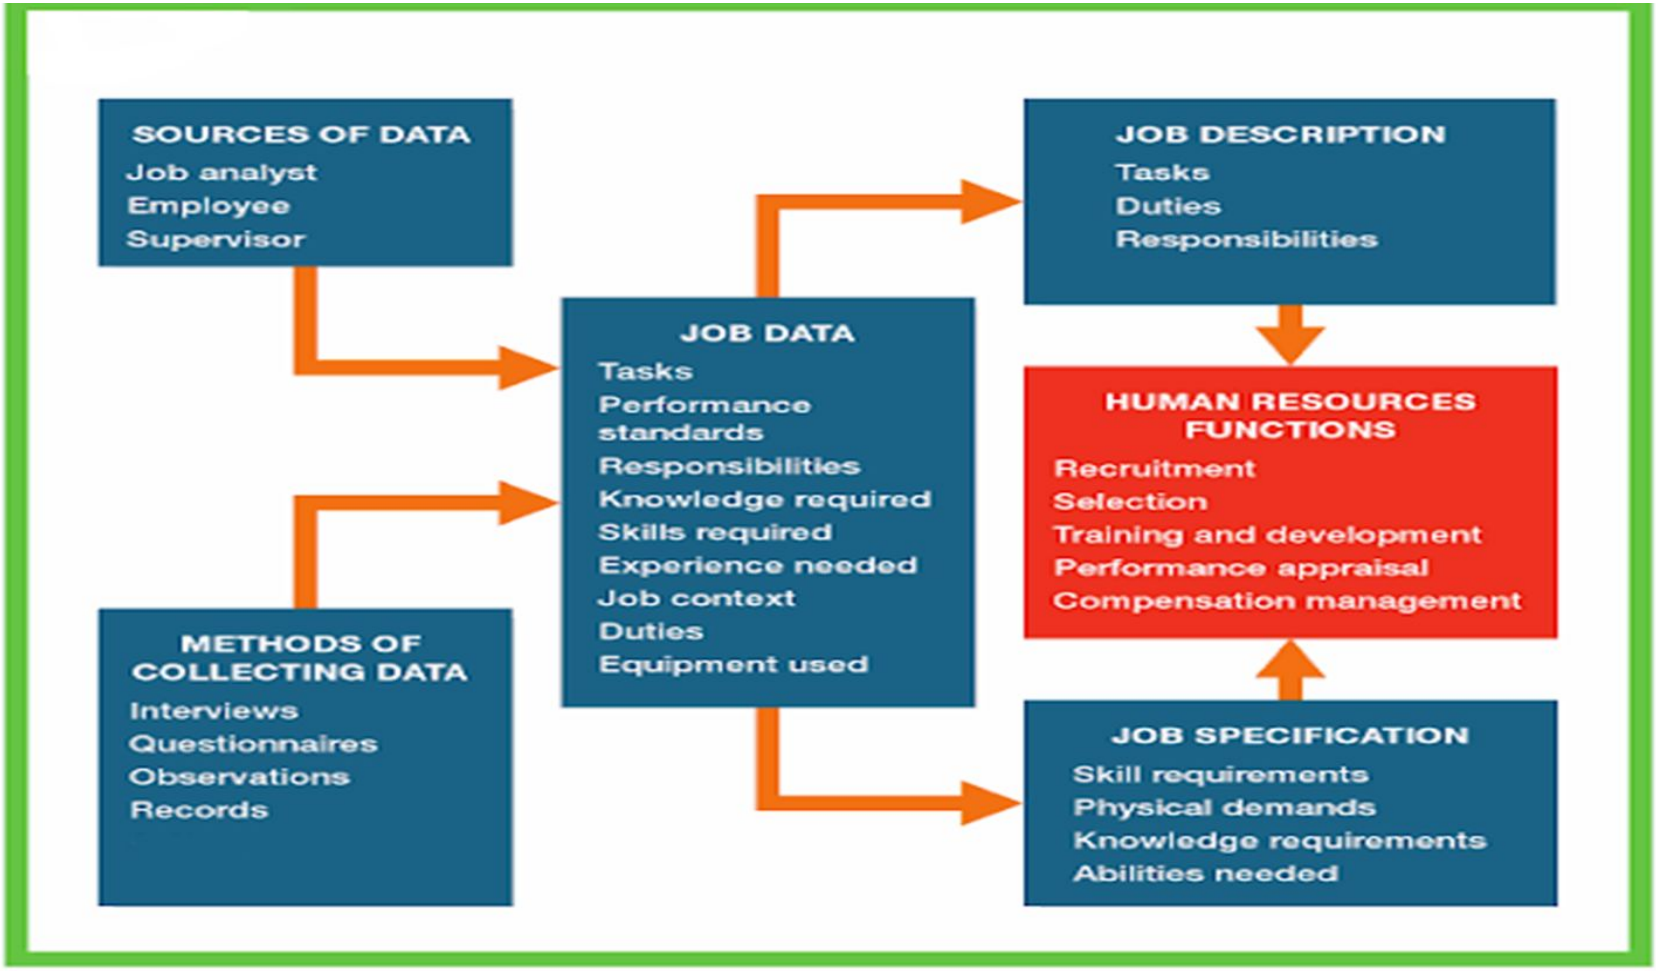
Types of Competencies

Type	Competencies
Core	Warrior Spirit; Servant's Heart; Fun-LUVing Attitude; Teamwork; Integrity/Honesty; Accountability/Pride; Humility; Service with LUV; Discipline; Reliability; Efficiency/Excellence
Organization	Culture-preservation; Customer-centricity; Employee empowerment; Low-cost mindset (efficiency, cost awareness); Operational discipline and safety culture; People-first mindset
Technical/Functional (job specific)	For pilots, maintenance staff, ground crew, operations staff, etc — safety-awareness, regulatory compliance, aircraft maintenance or operations skills, communication among crew, adaptability, problem-solving under pressure, technical skills relevant to role
Performance (for higher roles)	Strategic thinking / business acumen; People management and team development; Emotional intelligence; Agility and adaptability; Decision-making; Coaching/mentoring; Driving results while preserving culture; Leading change; Business performance orientation.
Performance (for lower roles)	Positive attitude , Team orientation, customer service mindset, safety orientation , efficiency , accountability

Steps of Job Analysis



Process of Job Analysis



Process of Job Analysis – Sources of Job Data

Non Human Sources

- Previous job analysis reports
- Existing job descriptions and specifications
- Equipment maintenance records
- Equipment design blueprints
- Architectural blueprints of work area
- Recordings of employee working
- Training manuals and materials
- Magazines, newspapers, other literature
- O'Net

Human Sources

- Job Incumbents
- Supervisors
- Job Experts

Process of Job Analysis – Methods of Collecting Data

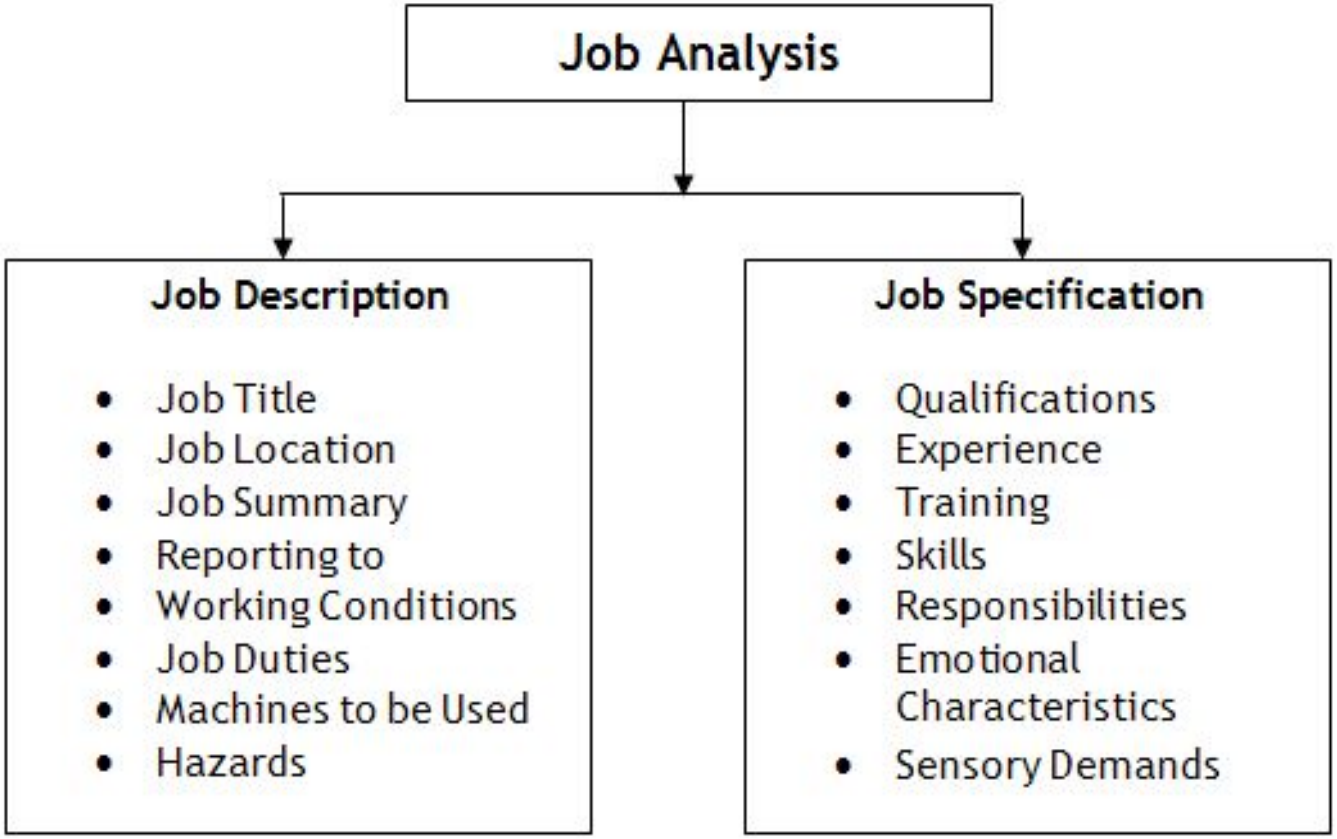
Qualitative

- Observation/task inventory
- Interview
- Questionnaire
- Checklists
- Critical Incident Method
- Technical Conference Method
- Diary Method
- Other documentation (Procedures, manuals etc.)

Quantitative

- Position Analysis Questionnaire
- Management Position Description Questionnaire
- Functional Job Analysis

Process of Job Analysis – Outcome of Job Analysis



Sample of Job Analysis

Job Summary

Company Name :
Godrej & Boyce Mfg. Co. Ltd.

Business :
Godrej Prima

Function :

Designation :
Sr. Executive / Assistant Manager

Location :
Ahmedabad

Key Responsibilities

1. Achieving business objectives of sales and service, as per plan
2. Channel Management and expansion.
3. Market intelligence and reporting
4. Assisting channel partners in acquisition and maintaining key accounts
5. Interacting & co-ordination with branch logistics, CST. Service and Marketing teams for ensuring customer delight.
6. Drive key initiatives of the organization

Sample of Job Analysis

Job Description

1. Achieving sales / service topline objectives thru designated channel partners and ensuring collections as per norms. Also maintain channel hygiene by timely closure of queries /complaints.
2. Plan for channel expansion as per the gap analysis and ABP.
3. Market coverage in city and upcountry dealer locations.
4. Inventory management of vending machines, sales and service consumables, hygiene and compliance at the local level as per norms.
5. Assist and guide channel partners in acquiring key customers through lead generation, negotiations, demos etc.
6. Conducting periodic sales and service trainings in coordination with HO for channel partners
7. Build required rapport with the channel partners and key accounts in the assigned territory so as to maintain desired consumption and service levels.
8. Studying competitor / market activity in the assigned territory & giving relevant feedback to Regional Head
9. Driving any new organizational initiatives as announced from time to time
10. Lead and manage team of outsourced sales and service personnel

Sample of Job Analysis

Qualification Details

Essential Qualification :

Graduate in any Discipline

Preferred Qualification :

MBA

Experience Details

Essential Experience :

Minimum 2 years of relevant work experience

Preferred Experience :

Exposure to Vending industry

Special Skills

Essential : Behavioral Competencies Required:

1. Negotiation Skills
2. Customer centricity
3. Analytical Skills
4. Interpersonal Skills
5. Result Orientation
6. Communication Skills

Preferred : 1. Knowledge of beverage vending industry

Use of O'Net to create a Job Description for Customer Service Associate

For the job in the article, pick the list of job duties from the article, use O'Net to compile a more complete list

Start by going to www.onetonline.org. Click on Find occupations, Key the job area in the Industry keyword drop down box and pick details

Click on summary for job summary and specific occupational duties

List the human requirement from O'Net by clicking on K, S and A and pick the information for job specification

Finalize the JD

Format of JD

- Position description
  - Job Title
  - Job Family
  - Reports to
  - Location
  - Recommended Salary Grade
- Summary of Job – descriptive
- Scope and Impact of Job
  - Supervisory responsibilities
- Primary responsibilities (list in order of importance and list amount of time spent on task)
- Competencies required
  - Core competencies
  - Position specific competencies
  - Physical demands and Work environment
- Required Qualification and Experience
  - Related work experience
  - Formal education or equivalent
- Signatures
  - Submitted by
  - Approval by

Use of O'Net to create a Job Description for Customer Service Associate

For the same job, create a JD for an Agentic AI Customer Service System

Format of JD

- Role description
  - Role Title
  - Department
  - Reports to
- Purpose of the AI agent
- Key responsibilities
- Capabilities
- Role constraints
- Interface with humans
- Required Data
- Performance metrics
- Signatures
  - Submitted by
  - Approval by

Purpose of Job Analysis

Job analysis purpose	Description
Job description	HR uses the output of the job analysis as input for a job description. A job description is an internal document that specifies the requirements for a new position, including the required skills, role in the team, personality, and capabilities of a suitable candidate. Creating a job description using data from a job analysis helps you place the right people in the right roles.
Job classification	Job classification is the process of placing one or more jobs into a cluster or family of similar positions. Data from job analysis is critical in job classification because it considers the duties, responsibilities, scope, and complexity of a job. The goal is to set pay rates and use the information in employee selection.

Purpose of Job Analysis

Job analysis purpose	Description
Job evaluation	Job evaluation is the process of determining the relative rank of different jobs in an organization. The purpose is to create pay transparency and equity. The rank of a job depends on the responsibility and duties assigned. For example, senior positions have higher performance and capability requirements. The job analysis helps understand these job characteristics.
Personnel requirements	HR can use the job analysis outcome to set the minimum qualifications or requirements of roles in the organization. This is also helpful in recruitment.
Job design	Job design is the process of creating a job that adds value to the company and is motivating to the employee. One of the characteristics of a motivating job includes skill variety, i.e., the degree to which a job requires a broad array of skills. Job analysis helps you determine the skill variety of a job.

Purpose of Job Analysis

Job analysis purpose	Description
Performance appraisal	The job analysis provides input for the performance appraisal of the individual performing the job. To evaluate an employee's performance, you need to understand the role requirements first. Job analysis can determine these details.
Worker training	Job analysis forms the basis of the training needs analysis. Once you identify the knowledge, skills, abilities, and other characteristics, you can quickly identify training needs or skill gaps and train your employees.
Worker mobility	People and jobs should fit together. Job analysis is useful in identifying the knowledge, skills, abilities, and other characteristics required for a role, which you can then match with an internal or external hire.

Purpose of Job Analysis

Job analysis purpose	Description
Efficiency	You can use job analysis to improve efficiency at work by analyzing activities and optimizing how people in the role perform them.
Health & safety	Job analysis can identify hazardous behaviors and working conditions that increase the chance of accidents and injury, leading to a safer working environment.
Workforce planning	Job analysis helps plan for the workforce of the future. It helps identify knowledge, skills, abilities, and other characteristics with future work demands. This enables the creation of a strategic workforce plan for a role or department.
Legal requirements	Federal and national law can apply to working conditions, health, hiring, training, pay, promotion, and firing employees. Job analysis can be a tool to ensure all activities in a role comply with the regulations.

Other methods of Job Analysis

- **Competency-based job analysis** means describing the job in terms of the measurable, observable, behavioral competencies (Knowledge, skills and/or behaviors) that an employee doing that job must exhibit to do the job well.
- **Outcome focused role descriptions** – Design ethicist, analyzing google's search algorithm for bias per month, keeping privacy risk log up to date – identifying ethical risks in google products or developing guidelines for ethical design of products- as technologies change with introduction of generative AI, it gives both Google and the employee to adapt
- **Skills focussed role descriptions** – Data analyst with superior visualization skills
- **Team based role descriptions** – In Spotify , Employees – part of small cross functional teams called squads with specific mission

Traditional Job Analysis Vs Competency Approach

- Traditional Job Analysis leads to:
  - long lists of tasks and the skills / knowledge required to perform each of those tasks
  - Data generation from subject matter experts; job incumbents
  - Effective Performance

- Competency based job analysis leads to:
  - A distilled set of underlying personal characteristics
  - Data generation from outstanding performers in addition to subject matter experts and other job incumbents
  - Outstanding Performance

Job Design

- Involves conscious efforts to organize tasks , duties, relationships and responsibilities into a unit of work to satisfy technological and organizational requirements as well as social and personal requirements of the job holder.
- Follows Job Analysis
- Involves 3 steps
  - Specification of Individual tasks (Content)
  - Specification of method(s) of performing each task, and(how)
  - Combination of tasks into specific jobs to be assigned to individuals and teams(Content)

Job Characteristics Model – Content of Work

- Theory by Hackman and Oldham states that employees will work hard when they ARE REWARDED FOR THE WORK THEY DO AND WHEN THE WORK GIVES THEM SATISFACTION. Hence integration of motivation, satisfaction and performance with job design is essential.

This approach to designing jobs includes such techniques as job enlargement, job enrichment, self-managing work teams, flexible work schedules, and telework

MPS = (skill variety + task identity + task significance) / 3 x autonomy x feedback.

Calculate the MPS of the below mentioned jobs:

	Professional/Technical	Managerial	Sales	Service	Clerical	Machine trades
Skill Variety	5.4	5.6	4.8	5	4	5.1
Task identity	5.1	4.7	4.4	4.7	4.7	4.9
Task significance	5.6	5.8	5.5	5.7	5.3	5.6
Autonomy	5.4	5.4	4.8	5	4.5	4.9
Feedback	5.1	5.2	5.4	5.1	4.6	4.9
Growth needs strength	5.6	5.3	5.7	5.4	5	4.8
Internal motivation	5.8	5.8	5.7	5.7	5.4	5.6
Pay satisfaction	4.4	4.6	4.5	4.1	4	4.2

It is a measure of overall potential of a job to foster intrinsic motivation. It can range from 1 to 343

The first 3 elements in the formula are task related and the last 2 elements are related to management of the job

MPS = (skill variety + task identity + task significance) / 3 x autonomy x feedback.

Calculate the MPS of the below mentioned jobs:

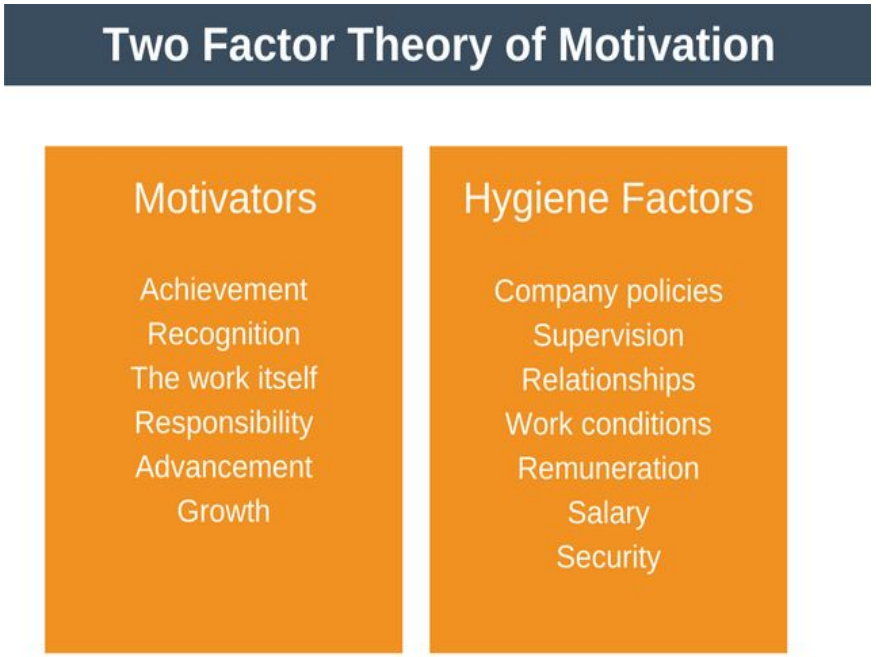
	Professional/Technical	Managerial	Sales	Service	Clerical	Machine trades
Skill Variety	5.4	5.6	4.8	5	4	5.1
Task identity	5.1	4.7	4.4	4.7	4.7	4.9
Task significance	5.6	5.8	5.5	5.7	5.3	5.6
Autonomy	5.4	5.4	4.8	5	4.5	4.9
Feedback	5.1	5.2	5.4	5.1	4.6	4.9
Growth needs strength	5.6	5.3	5.7	5.4	5	4.8
Internal motivation	5.8	5.8	5.7	5.7	5.4	5.6
Pay satisfaction	4.4	4.6	4.5	4.1	4	4.2
MPS	**147.798**	**150.696**	**127.008**	**130.9**	**96.6**	**124.852**

It is a measure of overall potential of a job to foster intrinsic motivation. It can range from 1 to 343

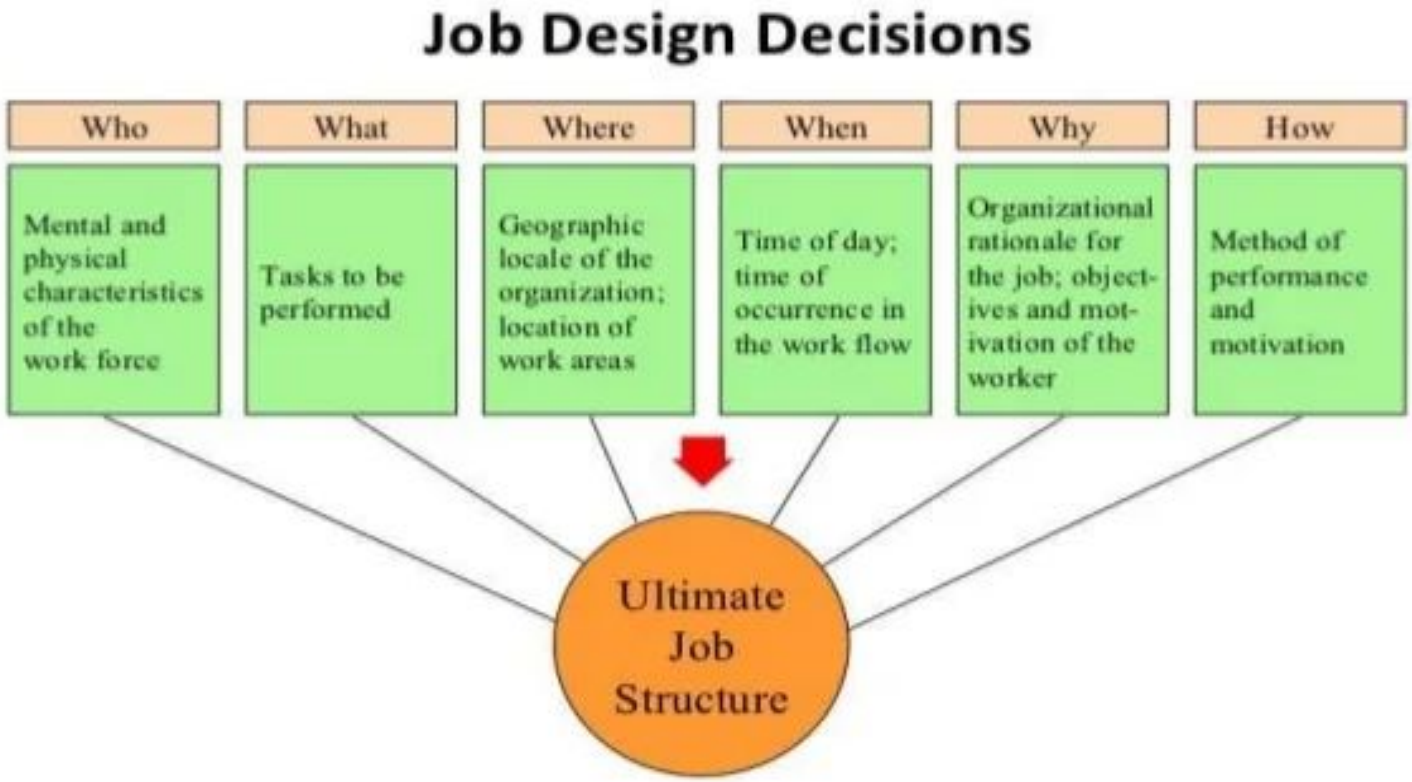
The first 3 elements in the formula are task related and the last 2 elements are related to management of the job

Herzberg's two factor theory

- The presence of motivators causes employees to work harder. They are found within the actual job itself. The absence of hygiene factors will cause employees to work less hard. Hygiene factors are not present in the actual job itself but surround the job. Proposed Job enrichment



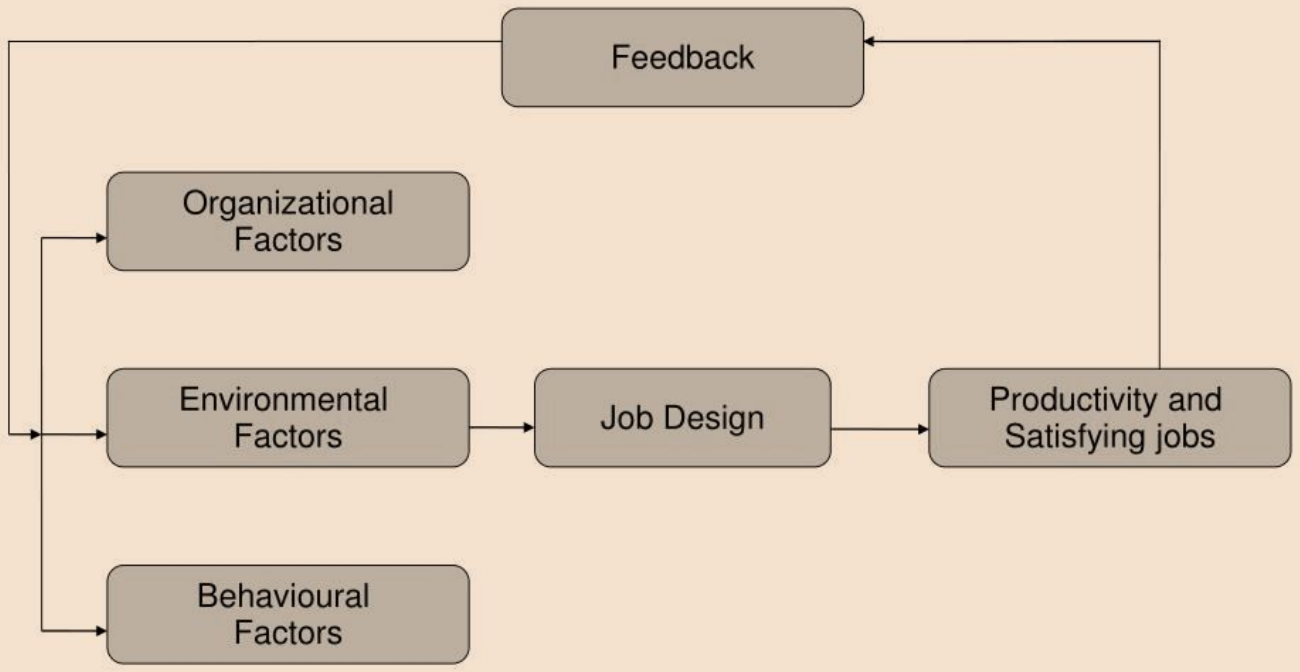
Elements and Decision of Job Design



Significance of Job Design

- Critical impact on organization and employee objectives
- Can affect productivity and costs and boring jobs may be difficult to fill
- Poorly designed jobs may lead to lower productivity , employee turnover , absenteeism, complaints, sabotage, unionization, resignations and other problems

Factors affecting Job Design (Job context)

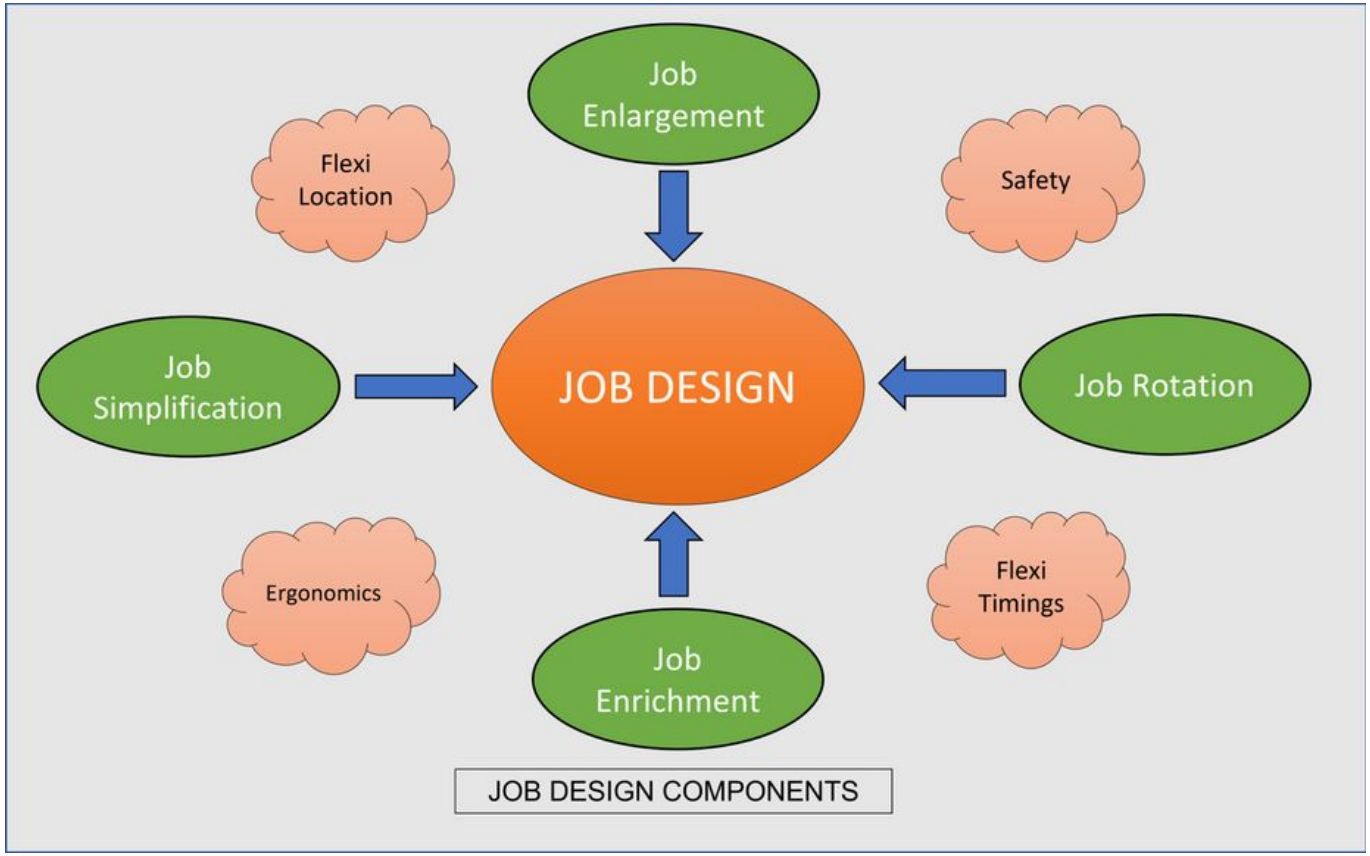


Source: Aswathappa, 2008, p. 126

Factors affecting Job Design(Job context)

Organizational factors	Environmental factors	Behavioral factors
1. Task characteristics	1. Employee availability and ability	1. Feed back
2. Process or flow of work in organization	2. Social and cultural expectations	2. Autonomy
3. Ergonomics		3. Variety
4. Work practices		

Job Design Approaches (Job relationships and role of manager)



Job Engineering

- Focuses on the tasks to be performed , methods to be used, workflows among employees , layout of the workforce , performance standards and interdependence among people and machines
- Focused on job specialization but yet is important JD approach since it results in cost savings

Job Rotation

- Refers to moving employees from job to job to add variety and reduce boredom
- Movement to another job at the same level that has similar skill requirements
- Training costs, Work disruption, Not suitable for intelligent and ambitious people who seek specific responsibilities

Job Enrichment

- Involves adding more motivators to a job to make it more rewarding
- Job becomes enriched when it gives job holder more decision making, planning and controlling powers
- An enriched job has 8 characteristics:
  - Direct feedback, Client relationship, New learning , Scheduling own work Unique experience, Control over resources , Direct communication authority, Personal accountability

Job Enlargement

- Refers to the expansion of the number of different tasks performed by an employee in a single job
- Leads to satisfaction more so if the job characteristics with respect to Task variety , meaningful work modules, ability utilization, worker paced control and performance feedback is taken care of

Socio Technical systems

- Focuses on the organization being made up of people with various competencies (social systems) who use tools, machines and techniques (the technical system) to create goods or services valued by customers and stakeholders
- These need to be designed with respect to one another and the customer / suppliers / stakeholders need

Contemporary issues in design of work

- Autonomous work teams for knowledge workers
- Flexitime
- Compressed work week
- Job sharing- Part or fractional time
- Telecommuting

The Label Says it All

Chief Listening Officer

THE WAILING wall for all employees. Looks after policies, compensation and career growth. Also known as the human resource head

People Success

A HUMAN resource officer who involves himself or herself closely in career development, and is a success enabler of employees and the organisation

Chief Pusher

OTHERWISE CALLED the chief executive officer. Now wears the 'nudging' badge high

Chief Ethics Officer

KEEPS A check on fraudulent behaviour, and a close watch on every business unit

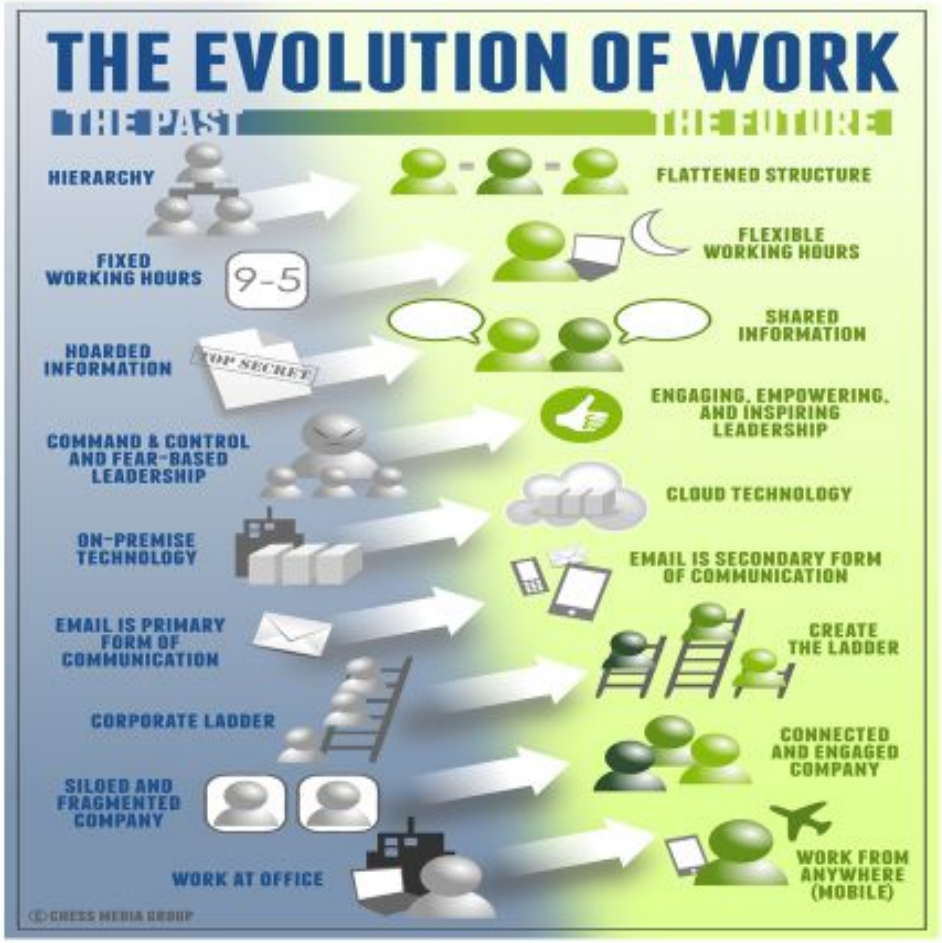
Chief Dreamer

IDEATES TO get more clients and business. In the traditional hierarchy, is called business development head

Agile Evangelist

THE ROLE involves promoting the adoption of Agile software across businesses

Evolution of Work and Impact on Job Analysis/Job Design



Thank You
